Art Unit: 1634

DETAILED ACTION

Specification

1. Claims 1 and 24 have been amended.

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 3. Claims 1, 3-6, 9, 11-14, and 24-25 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The specification discloses SEQ ID Nos: 8 and 10 which correspond to the cDNA/genomic DNA encoding the bacterial species Bacillus Megaterium 3-keto-acetyl-CoA reductase proteins having SEQ ID Nos: 9 and 11 respectively. Claims 1, 3-6, 9 and 11-14 are directed to encompass (all living being) gene sequences, sequences that hybridize to SEQ ID NOs: 8 and 10, corresponding sequences from other species, mutated sequences, allelic variants, splice variants, sequences that have a recited degree of identity (similarity, homology), and so forth. None of these sequences meet the written description provision of 35 USC 112, first

Application/Control Number: 09/479,040

Art Unit: 1634

paragraph. The specification provides insufficient written description to support the genus encompassed by the claim.

<u>Vas-Cath Inc. v. Mahurkar</u>, 19 USPQ2d 1111, makes clear that "applicant must convey with reasonable clarity to those skilled in the art that, as of the filing date sought, he or she was in possession *of the invention*. The invention is, for purposes of the 'written description' inquiry, whatever is now claimed." (See page 1117.) The specification does not "clearly allow persons of ordinary skill in the art to recognize that [he or she] invented what is claimed." (See <u>Vas-Cath</u> at page 1116.)

With the exception of SEQ ID NOs: 8 and 10, the skilled artisan cannot envision the detailed chemical structure of the encompassed polynucleotides and/or proteins, regardless of the complexity or simplicity of the method of isolation. Adequate written description requires more than a mere statement that it is part of the invention and reference to a potential method for isolating it. The nucleic acid itself is required. See Fiers v. Revel, 25 USPQ2d 1601, 1606 (CAFC 1993) and Amgen Inc. V. Chugai Pharmaceutical Co. Ltd., 18 USPQ2d 1016. In Fiddes v. Baird, 30 USPQ2d 1481, 1483, claims directed to mammalian FGF's were found unpatentable due to lack of written description for the broad class. The specification provided only the bovine sequence.

Finally, <u>University of California v. Eli Lilly and Co.</u>, 43 USPQ2d 1398, 1404, 1405 held that:

...To fulfill the written description requirement, a patent specification must describe an invention and do so in sufficient detail that one skilled in the art can clearly conclude that

Art Unit: 1634

"the inventor invented the claimed invention." Lockwood v. American Airlines, Inc. , 107 F.3d 1565, 1572, 41 USPQ2d 1961, 1966 (1997); In re Gosteli , 872 F.2d 1008, 1012, 10 USPQ2d 1614, 1618 (Fed. Cir. 1989) (" [T]he description must clearly allow persons of ordinary skill in the art to recognize that [the inventor] invented what is claimed."). Thus, an applicant complies with the written description requirement "by describing the invention, with all its claimed limitations, not that which makes it obvious," and by using "such descriptive means as words, structures, figures, diagrams, formulas, etc., that set forth the claimed invention." Lockwood , 107 F.3d at 1572, 41 USPQ2d at 1966.

An adequate written description of a DNA, such as the cDNA of the recombinant plasmids and microorganisms of the '525 patent, "requires a precise definition, such as by structure, formula, chemical name, or physical properties," not a mere wish or plan for obtaining the claimed chemical invention. *Fiers v. Revel*, 984 F.2d 1164, 1171, 25 USPQ2d 1601, 1606 (Fed. Cir. 1993). Accordingly, "an adequate written description of a DNA requires more than a mere statement that it is part of the invention and reference to a potential method for isolating it; what is required is a description of the DNA itself." Id. at 1170, 25 USPQ2d at 1606.

Therefore, only SEQ ID NOs: 8, 9,10 and 11 but not the full breadth of the claim (or none of the sequences encompassed by the claim) meets the written description provision of 35 USC 112, first paragraph. The species specifically disclosed are not representative of the genus because the genus is highly variant. Applicant is reminded that <u>Vas-Cath</u> makes clear that the written description provision of 35 USC 112 is severable from its enablement provision. (See page 1115.)

Claims 1, 3-6, 9 and 11-14 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Application/Control Number: 09/479,040

Art Unit: 1634

The current claims are drawn to a genus of any nucleic acids which either comprise specific Sequence ID Nos or which have 80% homology to SEQ ID Nos: 8 and 10 or which encode SEQ ID Nos: 9 and 11 having 3-keto-acyl coA reductase activity for D-isomers of C6 carbon chains than for C4 carbon chains and polyhrdoxyalkanoate synthase activity respectively. This large genus is represented in the specification by only the named SEQ ID Nos.

Thus, applicant has express possession of only two different amino acid species and two nucleic acid species in a genus which comprises hundreds of millions of different possibilities. The written description guidelines note regarding such genus/species situations that "Satisfactory disclosure of a "representative number" depends on whether one of skill in the art would recognize that the applicant was in possession of the necessary common attributes or features of the elements possessed by the members of the genus in view of the species disclosed." (See: Federal Register: December 21, 1999 (Volume 64, Number 244), revised guidelines for written description.) Here, no common elements or attributes of the sequences are disclosed and no structural limitations or requirements which provide guidance on the identification of sequences which meet these functional limitations is provided. Further there is no methodology presented to determine such common elements or attributes. Further, there is no description of portions of the nucleic acids.

Further, these claims expressly encompass genomic nucleic acids and not even complete cDNA sequences have been provided. Lastly, with regard to the written description, all of these claims encompass nucleic acid sequences different from those disclosed in the specific SEQ ID No:s

Application/Control Number: 09/479,040

Art Unit: 1634

which include modifications permitted by the 80% language and by the hybridization or stringency language for which no written description is provided in the specification. It is noted that in Fiers v. Sugano (25 USPQ2d, 1601), the Fed. Cir. concluded that "...if inventor is unable to envision detailed chemical structure of DNA sequence coding for specific protein, as well as method of obtaining it, then conception is not achieved until reduction to practice has occurred, that is, until after gene has been isolated...conception of any chemical substance, requires definition of that substance other than by its functional utility."

In the instant application, only the nucleic acid and amino acid sequence of the disclosed SEQ ID Nos are described. Also, in <u>Vas-Cath Inc. v. Mahurkar</u> (19 USPQ2d 1111, CAFC 1991), it was concluded that:

"...applicant must also convey, with reasonable clarity to those skilled in art, that applicant, as of filing date sought, was in possession of invention, with invention being, for purposes of "written description" inquiry, whatever is presently claimed."

Response to Amendment

4. In response to amendment, all rejection under 35 U.S.C.112 (second paragraph) rejection has been withdrawn. However, rejection under 35 U.S.C.112 (first paragraph) has been properly maintained.

Application/Control Number: 09/479,040

Art Unit: 1634

Response to Arguments

5. Applicant's arguments filed on July 11, 2002, have been fully considered but they are

not persuasive.

Applicant argues that 112 (first paragraph) rejection should be withdrawn because nucleic

acid sequence having at least about 80 % homology to SEQ ID NO:8 will only form hydrogen

bond with SEQ ID NO:8 to be in the correct spatial location, orientation, and have the correct

charge and therefore will hybridize with SEQ ID NO:8.. This argument is not persuasive. First of

all, hybridization is only intended use of the nucleic acid which is not given any further

patentable weight and does not alter or modify the claimed product.

Secondly, with regard to the written description, all of these claims encompass nucleic acid

sequences different from those disclosed in the specific SEQ ID No:s which include

modifications permitted by the 80% language and by the hybridization or stringency language for

which no written description is provided in the specification. Further, there is no description of

portions of the nucleic acids. Further, these claims expressly encompass genomic nucleic acids

and not even complete cDNA sequences have been provided.

Applicant also argues that the inquiry into adequate written description is not performed in

a vacuum. This argument is not persuasive in absence of the alternative methods disclosed by the

applicant how it is performed.

performed.

In view of the response to argument, all 112 (first paragraph) rejections are hereby being

Art Unit: 1634

maintained.

Conclusion

7. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CAR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CAR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arun Chakrabarti, Ph. D., whose telephone number is (703) 306-5818. The examiner can normally be reached on 7:00 AM-4:30 PM from Monday to Friday. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Jones, can be reached on (703) 308-1152. The fax phone number for this Group is (703) 305-7401. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group analyst Chantae Dessau whose telephone number is (703)605-1237
